

EVENT: SPACE RESOURCES WEEK 2023 in Luxembourg

Space Resources Week will take place between 19 and 21 April 2023 as a 3-day hybrid conference connecting thought leaders from space agencies, research institutes, start-ups, and industry (both terrestrial and space). This edition's focus: the synergies for an inclusive space resources utilization ecosystem and the acceleration of the use of space for the benefit of humankind.

The space resources community is growing and this is clear from the increasing number of contributors and participants we have seen attending our Space Resources Week events since 2018. The Space Resources Week 2022 attracted 300 people on-site in Luxembourg and close to 700 people online.

The next edition of Space Resources Week will take place between 19 and 21 April 2023 as a 3-day hybrid conference connecting thought leaders from space agencies,

research institutes, start-ups, and industry (both terrestrial and space).

During this year's event we will focus on the synergies required for the development of an inclusive space resources utilization ecosystem, as well as on ways of accelerating the use of space for the benefit of humankind.

You can expect a series of captivating speeches and interactive sessions on new technologies, business models and concrete next steps, from inspiring scientists, economists, lawyers, and business professionals. The event is focused on drawing a clear path between key actors, based on an interconnected approach aimed at sustained and sustainable activities beyond Earth.

With this annual event, we aim to bring together our multidisciplinary community to exchange and identify opportunities for synergy across the truly dynamic field of space resources.

Organised by:

- European Space Resources Innovation Centre
- Luxembourg Space Agency
- European Space Agency
- Luxembourg Institute of Science & Technology

On-site attendance: EUR 100 (including lunches, coffee breaks and two networking cocktails)

Livestreaming only: Free
