

# NEW: Copernicus Data Space Ecosystem portal released!

The European Commission has announced the first release of the Copernicus Data Space Ecosystem portal! This portal will be a gateway to Copernicus Sentinel data as well as other data together with data processing functionalities.

Watch the short video at this link to know more.

The new Copernicus Data Space Ecosystem follows on from the success of the current Copernicus Data Hub distribution service, which has reached more than 500 PB of Sentinel data downloaded by a growing community of more than 600,000 registered users, ensuring the continuity of the open and free access to Copernicus data and extending the portfolio for data processing and data access possibilities. Users can now access a first release of the Copernicus Data Space Ecosystem via the new web portal.

New service functionalities together with portal updates will be released in the coming months in line with the service roadmap as documented on the new web portal.

Users of the current Copernicus Data Hub distribution service are encouraged to re-register on the new web portal and migrate their workflows to the Copernicus Data Space Ecosystem before July 2023.

The Copernicus Data Hub distribution service will continue its full operations until the end of June 2023 to allow a smooth migration to the new Copernicus Data Space Ecosystem service by all user communities.

As from July 2023 and until September 2023, the Copernicus Data Hub distribution service will continue offering access to Sentinel data with a gradual ramp-down of the operations capacity and data offering.
